## **About Spidertracks**

It wasn't much more than a decade ago when aircraft tracking was feasible only for the top tier of the industry. Innovation in the sector typically followed a traditional pathway of heavy boxes that required cumbersome installations & the cost and complexity of these prevented mainstream adoption.

Spidertracks came to market with fresh thinking & a delightfully simple product philosophy that removed these obstacles & revolutionised the sector. Today, aircraft tracking has industry-wide adoption — resulting in increased safety & operational efficiencies.

Spidertracks are propelled every day by their desire to help make the aviation community a safer place to live and operate in.

They're leveraging more than 14 years of expertise to offer aircraft owners and operators an easy entry into FDM. Their latest evolution, Insights, will break down the barriers of entry by utilising data captured on their latest hardware Spider X, to deliver actionable information in a simple & easy format.
